

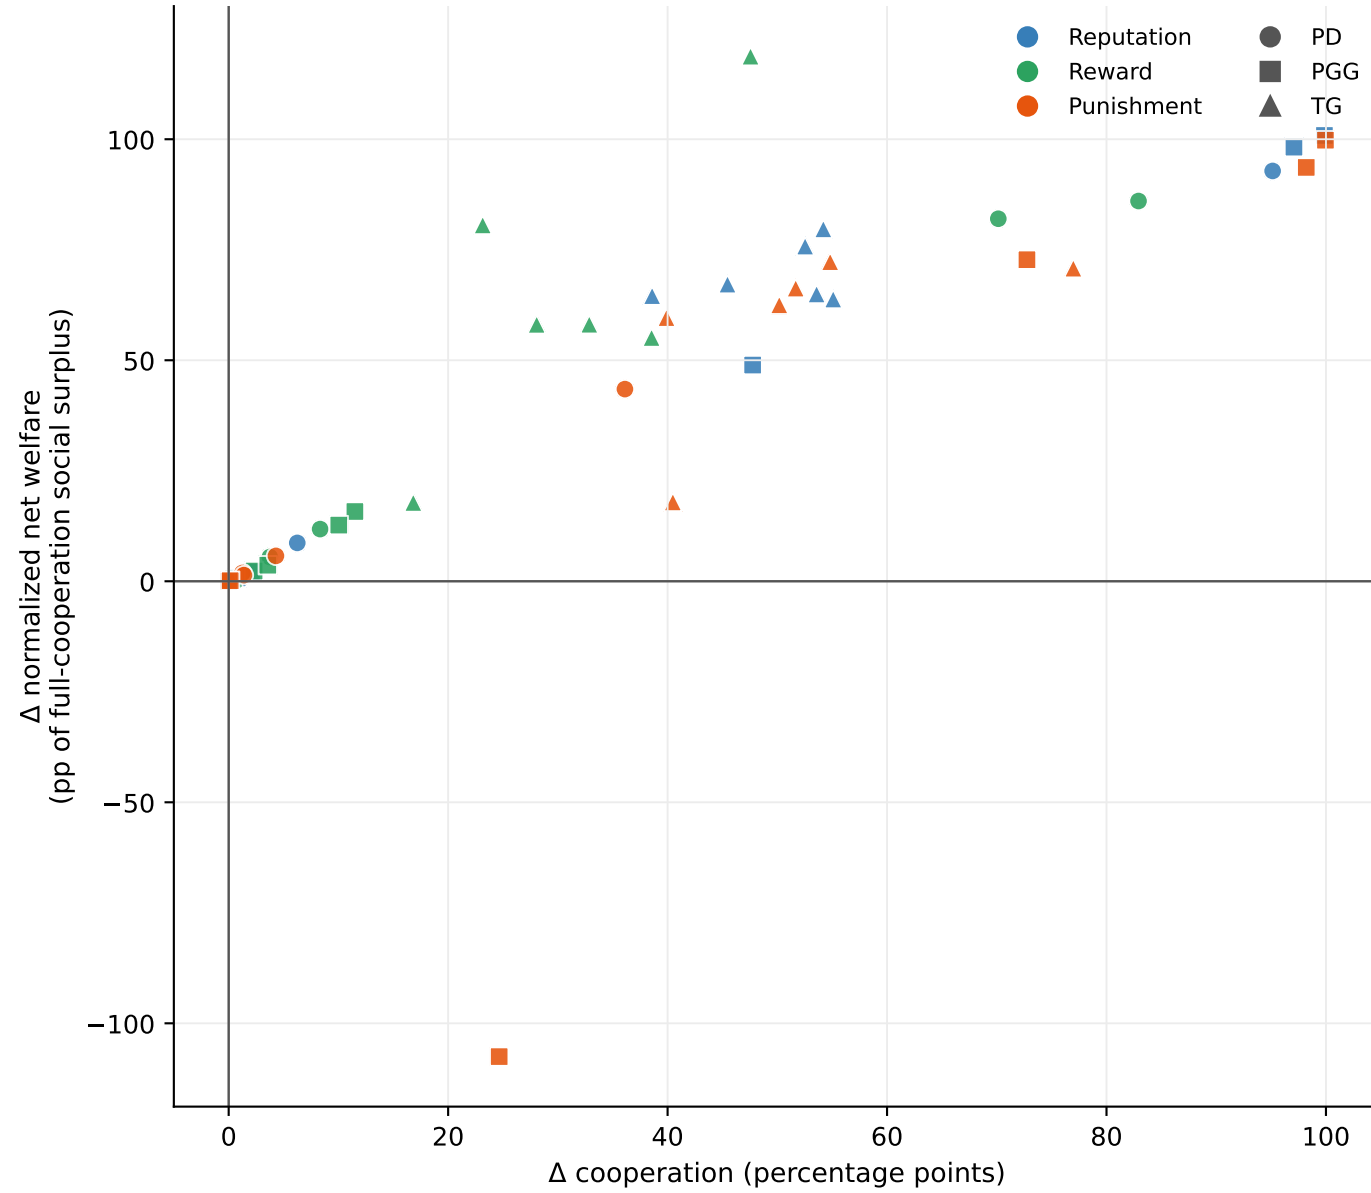

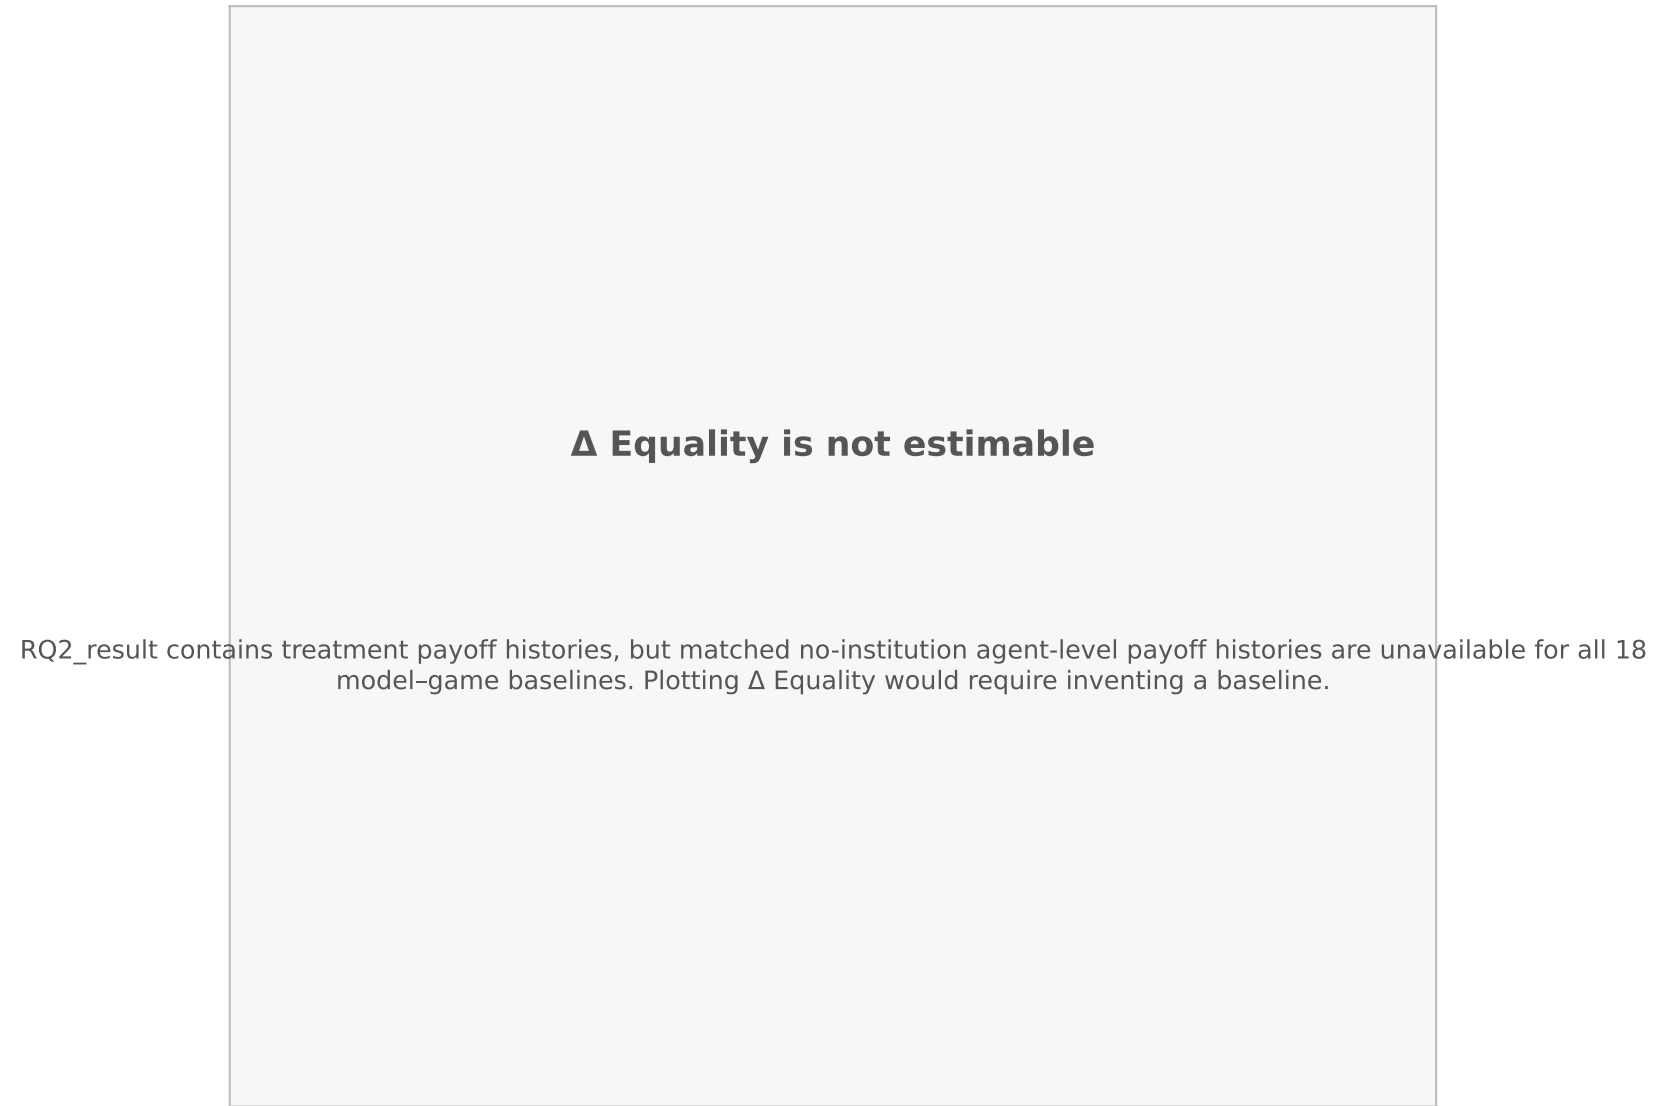

Figure 4. RQ2 cooperation quality and evidential coverage

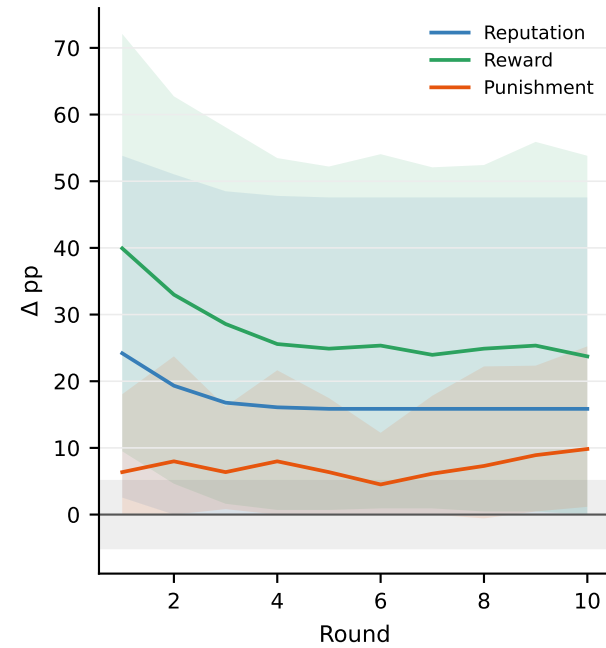

A Cooperation change and cost-adjusted welfare change

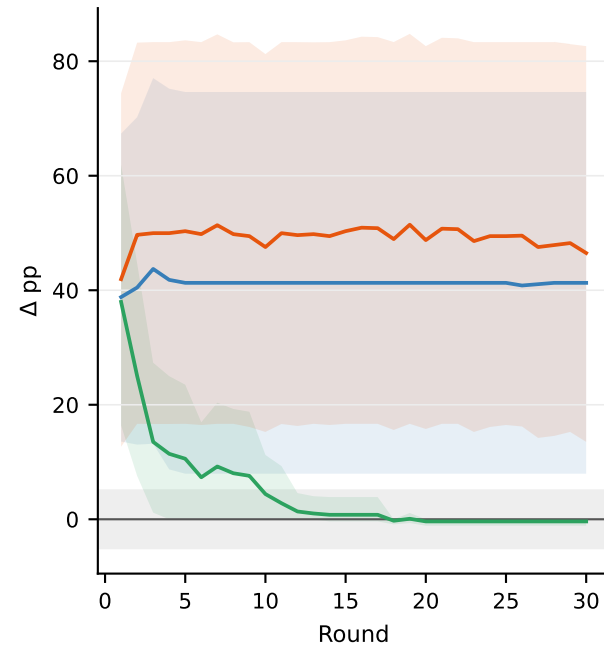

B Efficiency-equality trade-off

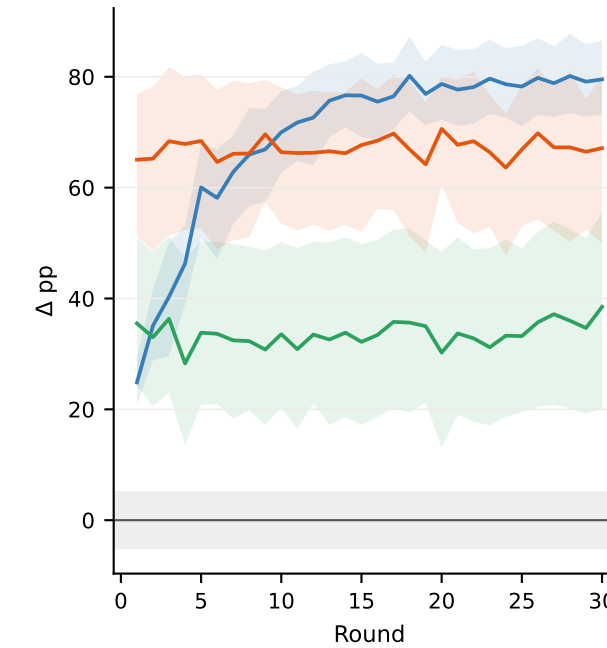

C Prisoner's dilemma: cooperation

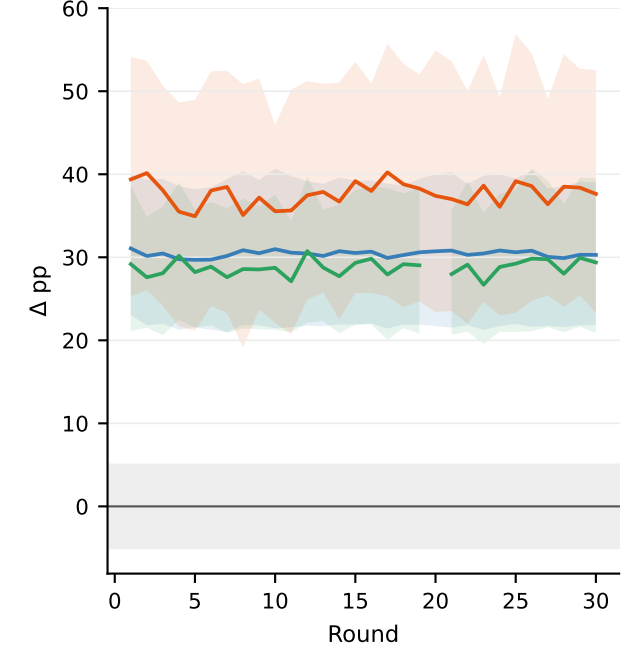

Public-goods game: contribution

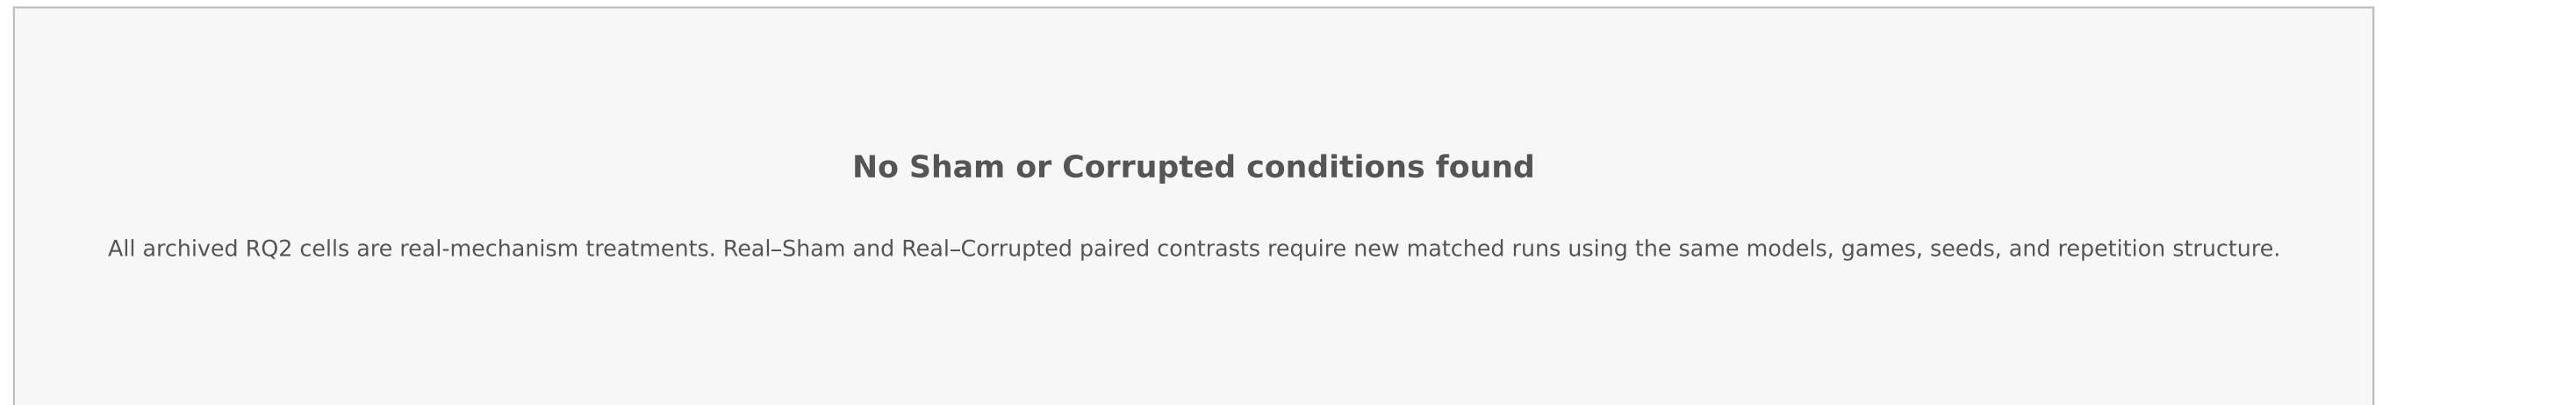

Trust game: Sender transfer

Trust game: Receiver conditional return

D Real versus sham/corrupted mechanisms

A: final payoffs are used, so recorded reward/punishment costs are not deducted twice. C: 95% percentile intervals from a two-stage model/run bootstrap; each model's retained overall RQ1 baseline is fixed across rounds. B and D are deliberately not imputed.
